

How to open your workspace into and install MCreator

For further editing and adding to your mods you'll have to recreate your workspace at home - here is how!

1. Download the Ninja's ZIP folder from the Github
2. After it has been installed, extract your workspace zip file into a folder on your desktop
3. Download MCreator from this link: <https://mcreator.net/download>
4. After downloading, run the file and follow the installation steps.
5. Open Mcreator and click "Open Workspace"
6. Navigate to the extracted folder and open the .Mcreator file
7. It might take a moment or two to load, but once it has you'll be free to access your workspace like before.

How to install your mod into Minecraft

1. Download the [name].jar file from GitHub
2. Go to <https://files.minecraftforge.net/net/minecraftforge/forge/> and find the version that your mod was created in. [Typically use 1.20.6] (You will be prompted with an ad upon clicking on download, you should click on the top right after a few seconds to skip.)
3. Run the file you downloaded and follow the steps it provides and click install client, then click OK. (If you are unable to run the file, follow the Install Java steps.)
4. Open Curseforge and open the Minecraft Menu
5. Create a Custom Profile, be sure to set the Minecraft Version to 1.20.1
6. Once the profile has been installed, hit the 3 dots and navigate to mod folder and wait for the files to open
7. Drag the .jar file into the folder titled mods then close the file window
8. Now, Ninjas should be able to launch their modded Minecraft game through the CurseForge profile. After a moment it will launch the Minecraft Launcher and at the top the option to launch with their mod should be present.

How to open your workspace into and install MCreator

- 1: Download MCreator from this link: <https://mcreator.net/download>
- 2: After downloading, run the file and follow the installation steps.
- 3: After it has been installed, extract your workspace zip file into a folder on your desktop, and run the MCreator workspace file after it has been extracted, and MCreator should start automatically loading your workspace.

How to install your mod into Minecraft

- 1: Go to <https://files.minecraftforge.net/net/minecraftforge/forge/> and find the version that your mod was created in (Typically 1.20.4). **(You will be prompted with an ad upon clicking on download, click on the top right after a few seconds to skip.)**
- 2: Run the file you downloaded and follow the steps it provides and click install client, then click OK. **(If you are unable to run the file, follow the Install Java steps.)**
- 2: Go to the directory where your minecraft folder is located
(Typically C:/Users/USER/AppData/Roaming/.minecraft | | Replace USER with your windows username)
- 4: Create a new folder named "mods" within the .minecraft folder and place your mod into this folder
- 5: After this open Minecraft Launcher and there should be a version called Forge (Version Number), start this and you should be able to play with your mods in game.

Install Java (Not needed unless step 2 of Install Mod doesn't work)

- 1: Go to this link, and the file for Java will download
https://download.oracle.com/java/22/latest/jdk-22_windows-x64_bin.msi
- 2: After downloading, run the file and follow installation steps.

3: After this is done, continue from step 2.
