

How to Access your Mods from Home

Ninjas! You've worked so hard on these over the past week, now it's time to take them home and play them! Follow these steps to start playing at home.

1. Us Sensei's have already uploaded all of your files online. In order to download them onto your own computer go to <https://github.com/cn-eugene?tab=repositories> and find the correct page for your camp.
2. All the mods are saved as ZIP files, find the one that is yours (It's listed under your name Ninjas!) and download onto your computer
3. Now follow the next steps

How to open your workspace into and install MCreator

For further editing and adding to your mods you'll have to recreate your workspace at home - here is how!

1. Download MCreator from this link: <https://mcreator.net/download>
2. After downloading, run the file and follow the installation steps.
3. After it has been installed, extract your workspace zip file into a folder on your desktop, and run the MCreator workspace file present in the folder after it has been extracted
4. MCreator should start automatically loading your workspace now

How to install your mod into Minecraft

1. Go to <https://files.minecraftforge.net/net/minecraftforge/forge/> and find the version that your mod was created in. [Typically use 1.20.4] (You will be prompted with an ad upon clicking on download, you should click on the top right after a few seconds to skip.)
2. Run the file you downloaded and follow the steps it provides and click install client, then click OK. (If you are unable to run the file, follow the Install Java steps.)
3. Go to the directory where your minecraft file is located (Typically C:/Users/USER/AppData/Roaming/.minecraft | | Replace USER with your windows username)
4. Create a new folder named mods and place your mod into this folder
5. After this open Minecraft Launcher, there should be a version called Forge (Version Number), start this and you should be able to play with your mods in game.

Install Java (Not needed unless step 2 doesn't work)

1. Go to this link, and the file for Java will install
https://download.oracle.com/java/22/latest/jdk-22_windows-x64_bin.msi
2. After downloading, run the file and follow installation steps.
3. After this is done, continue from step 2.
